Dear Jack,

Today I returned the corrected proof of "Genetics of *Salmonella*", which I had received couple days ago, to Dr. E. van Oye.

Except correction of printing errors and addition of two deleted references, I did not make any alteration in the text.

According to your suggestion, I ordered 600 copies (including 50 free) of reprint; 300 of them will be forwarded to you.

In collaboration with Dr. Asakura, an assistant professor of the Inst. of Molecular Biology, Nagoya University, I have been doing some interesting studies on the *in vitro* polymerization of flagellin of various mutant flagella. I expect we can send the manuscript of our first report to Jour. Mol. Biol. soon. A copy, of course, will be sent to you. The manuscript writing on "genetics of fla-genes" and "antigenic expression in transductional heterogenotes" is also on the way.

(turn) \Rightarrow (A)

This space is also for correspondence.

It will be finished by April. Both

Kumiko & I have been doing well.

Our new house in the north suburbs of
Misima city is under construction.

We will move there in April. We will be
able to invite you to our small but own
house when you will visit Japan next time.
